

ERP

The most promising ERP solution may be Microsoft's Dynamics 365. It offers a free trial to start, great flexibility in applications and integrations, and carries the expertise of a giant in the computing industry.

SAP S/4HANA

Offers most of what we would need for our business and system. The service requires technical skill and a separate accounting hub, they provide on-premise installation which is not easily configurable.

Oracle ERP Cloud

A modern solution that works across all platforms and enterprises. Offer everything we would need and uses modern standards of ERP.

Microsoft Dynamics 365

Offer much of the same as Oracle, including solutions for finance, retail, manufacturing, and cloud services. Allows greater flexibility with prebuilt application integrations, and custom build applications as well. They offer a free 30 day trial.

Sage ERP Solutions

A modern ERP suite with feature sets divided into tiers from small business to enterprise systems. While their time in the field is valuable, the limiting tiers and solutions are unattractive.
